

BE PREPARED FOR EXTREME HEAT

FEMA

FEMA P-2143/November 2020

**Extreme heat often results
in the highest annual
number of deaths among all
weather-related disasters.**

**In most of the U.S.,
extreme heat is a long period
(2 to 3 days) of high heat and
humidity with temperatures
above 90 degrees.**

Greater risk

Can happen anywhere

**Humidity increases the
feeling of heat as measured
by a heat index**

IF YOU ARE UNDER AN EXTREME HEAT WARNING

Find air conditioning, if possible.

**Check on family members
and neighbors.**

Avoid strenuous activities.

Drink plenty of fluids.

Watch for heat illness.

**Watch for heat cramps, heat
exhaustion, and heat stroke.**

Wear light clothing.

**Never leave people or pets
in a closed car.**

HOW TO STAY SAFE

WHEN EXTREME HEAT THREATENS

Find places in your community where you can go to get cool.

Try to keep your home cool:

- Cover windows with drapes or shades.
- Weather-strip doors and windows.
- Use window reflectors such as aluminum foil-covered cardboard to reflect heat back outside.
- Add insulation to keep the heat out.
- Use attic fans to clear hot air.
- Install window air conditioners and insulate around them.

Learn to recognize the signs of heat illness.

Take an Active Role in Your Safety

Go to **ready.gov** and search for **extreme heat**. Download the **FEMA app** to get more information about preparing for **extreme heat**. Find Emergency Safety Tips under Prepare.

Never leave a child, adult, or animal alone inside a vehicle on a warm day.

Find places with air conditioning.

Libraries, shopping malls, and community centers can provide a cool place to take a break from the heat.

If you're outside, find shade. Wear a hat wide enough to protect your face.

Wear loose, lightweight, light-colored clothing.

Drink plenty of fluids to stay hydrated. If you or someone you care for is on a special diet, ask a doctor what would be best.

Do not use electric fans when the temperature outside is more than 95 degrees. You could increase the risk of heat-related illness. Fans create air flow and a false sense of comfort, but do not reduce body temperature.

Avoid high-energy activities.

Check yourself, family members, and neighbors for signs of heat-related illness.

Know the signs and ways to treat heat-related illness.

HEAT CRAMPS

- **Signs:** Muscle pains or spasms in the stomach, arms, or legs
- **Actions:** Go to a cooler location. Remove excess clothing. Take sips of cool sports drinks with salt and sugar. Get medical help if cramps last more than an hour.

HEAT EXHAUSTION

- **Signs:** Heavy sweating, paleness, muscle cramps, tiredness, weakness, dizziness, headache, nausea or vomiting, fainting
- **Actions:** Go to an air-conditioned place and lie down. Loosen or remove clothing. Take a cool bath. Take sips of cool sports drinks with salt and sugar. Get medical help if symptoms get worse or last more than an hour.

HEAT STROKE

- **Signs:** Extremely high body temperature (above 103 degrees) taken orally; red, hot, and dry skin with no sweat; rapid, strong pulse; dizziness; confusion; unconsciousness
- **Actions:** Call 911 or get the person to a hospital immediately. Cool down with whatever methods are available until medical help arrives.
